

Hey!

What if There is a Whole Different World Out There Which No One Has Told You About?

This Pamphlet Changes That.

Imagine for a second that you were going to write a letter from the future, 50 years from now. What would you wish for the United States? How about everybody, the whole society, focusing on rebuilding our present cities and whole new beautiful cities? What about adopting a plan to eliminate poverty within our population in seven years? What if we had high speed rail to take us across country or simply down the coast? What if we invested in the science to control the weather, manage water resources on a planetary scale, and prevent or mitigate whole classes of diseases? What if we were exploring space and mining the moon for production of fusion energy, ending all ideas of the limits to growth? What if our young people were excited about being scientists and artists building the future and knew the prospects before them were boundless as long as they celebrated and employed the creativity which is uniquely human?

All of these ideas, once the province of how Americans thought about economics and society, are now being practiced and implemented in China. China has spread this infectious new paradigm of thinking throughout China. It is collaborating with the nations of Africa to forge a new modern infrastructure platform for the entire continent, featuring connected rail, new cities, new ports. Similar plans and projects dot the developing world.

While this is happening, we are locked up in the failed Anglo-Dutch monetary system dominated by the casino economies of Wall Street and the City of London. Their new financial bubble teeters on the edge of collapse. Thousands are dying from an out of control opioid epidemic. We debate sexual relations while the infrastructure upon which our economy sits rots away after decades of disrepair.

We need trillions of dollars in new infrastructure to rebuild our economy, But Wall Street says, no, no,

no, we can't afford to do what is necessary for human survival. Cut, cut, cut, chisel, chisel, chisel. Having long ago invented the system for financing huge infrastructure — the same system China now uses — Alexander Hamilton would recoil at how small minded and stupid we have become.

Grab and read this pamphlet: America's Future On the New Silk Road. It tells you about China's great initiative and how to rebuild our economy. You'll be happy that you did.
