

THE HAMILTONIAN

SHE IS A FRAUD!

Die for Hillary's Wall Street or Win with LaRouche

By MICHAEL STEGER

Hillary's campaign for President is a vacuous fraud. She staked her campaign on Obama's satanic legacy, foremost by her outright rejection of Glass-Steagall, especially after she was publicly challenged by LaRouche activist Daniel Burke while speaking on her economic policy at The New School in New York City in July of 2015, where she was too cowardly to even address the issue.

Besides her bedroom dalliance with Wall St., she has jumped into the sack with Obama's favorite mum, the British Queen, calling for war with Russia as the main selling point for what amounts to a pointless and surreal campaign. Things have become so outlandish, that even her top advisers cannot but blame the Soviet-era K.G.B. (sic) on her collapsing numbers, loss of trust, and low turnout. Perhaps it has to do more with the fact that most Americans abhor the current Wall St. system, are horrified by the rhetoric against Russia, are dismayed by the failures of the war against terrorism, terrified of Obama's blood thirsty drone killings, see no hope of economic recovery via green jobs and climate scaremongering, and are facing cultural breakdown due to the drug epidemic and collapse of healthcare, jobs, and basic productivity. In other words, acting on behalf of the British imperial interests undeniably disqualifies her for the Presidency in the minds of a great majority of the American people!

Let's make something clear. The Glass-Steagall law and U.S. policy towards Russia and China are not just two issues among many—they are the existential questions determining the future of our

nation and our civilization. It is not just the question of war and peace, but of the survival of civilization. Any President who fails on these issues shall be condemned early and often by the American people—if we are still here to condemn them.

Consider that the entire trans-Atlantic financial system has been in a perpetual melt-down since 2008, as if preserved in formaldehyde by Obama's bailouts and central bank stock buybacks, all to prop up the venereal stock market indices, while the physical economy—the one people actually depend upon for physical survival—becomes more and more incapable of supporting a healthy and productive human population—which is the actual baseline economic metric, in case you forgot!

Glass-Steagall is the initial first step in a full national recovery (see page 2 for the full comprehensive program). Not only will Glass-Steagall stop the economic bloodletting and provide immediate relief to the great majority of the American people, it will be another "shot heard round the world!" This resurgence of a true United States, one of Hamilton and John Quincy Adams, Lincoln and Franklin Roosevelt, will facilitate an entirely new global economic and strategic system, providing the long-term basis for a reconstruction of our national economy.

To Donald Trump's credit, he has made a commitment to Glass-Steagall, and has acknowledged Hillary Clinton's desperate attempt to cast Vladimir Putin and Russia as the enemy image, and thereby risking nuclear war. Much as both Bush 41 and 43 pushed British geopolitical schemes of perpetual war in the Middle East, including

the attacks on 9/11, so now Hillary Clinton, not even yet President, resorts to these same dangerous measures, blaming all her problems on Russia and ultimately pushing a policy of nuclear confrontation!

From any perspective other than the psychotic Obama-Clinton legacy, Russia and China are the greatest potential allies for the U.S. From economic development (see China's New Silk Road and the LaRouchePAC World Landbridge), the war on terror (see Russia's actions in Syria as well as China's New Silk Road for development in southwest Asia), the international drug trade (e.g. eradicating the opium fields in Afghanistan and building up south Asia via China's New Silk Road), ending global poverty (see development projects in places like Libya, Ethiopia, and even eastern Europe via China's New Silk Road), and even reinvigorating our national space program (we currently use Russian rockets for manned-flight, and China has the most advanced space program on the planet). These three major nations, the U.S., Russia, and China—each of which played a critical role in the victory over fascism in World War II—remain the most important nations in the world to eradicate the scourge of what remains of a dying British Empire today, and the establishment of a new platform for the creative advancement of the human species more broadly.

There is little doubt that, if elected, under her current direction Hillary will have a failed Presidency much like Obama—if not early indictment, impeachment, and a humiliating resignation. She has no support among even the base of the Demo-

cratic Party, especially on the question of Glass-Steagall, and her war mongering towards Russia, Syria, et al.

Hillary's great compromise with Obama was her very political downfall. She lied, and continues to lie, just so she can be President. That is not a worthwhile campaign. Her perpetual lies have protected Obama's murderous program, but, Hillary's greatest fraud is her lack of devotion to the American people, and to the truth. She is a failed

person, a functioning British agent, and she should not be allowed near the Presidency.

The American people must demand a functioning Presidency based on the full recovery program of LaRouche's Four New Laws, and the establishment of working ties with Russia, China, as well as all other major nations. The times are dire and existential, but there is also great potential in the world. Our action is urgent regardless of the outcome of this election.

ENACT LAROUCHE'S FOUR LAWS NOW!

Restore National Mission for Scientific Progress

By KESHA ROGERS, FORMER U.S. SENATE CANDIDATE IN TEXAS

Lyndon LaRouche has defined the standard for economic progress and the measures urgently needed today to free the United States and the world from the grips of a total dark age culture of death and despair, to one that develops the greatest creative potential of every person living today, and most importantly our commitment to the those generations yet to be born. As LaRouche has developed, "The question in terms of economy involves not simply products capable of measurement as such, but rather involves the requirement of developing human minds in new ways that the human mind has ever fashioned to do it."

LaRouche develops his four urgently needed laws to save the United States today. The four measures are described here in short:

1. The immediate re-enactment of the Glass-Steagall law instituted by U.S. President Franklin D. Roosevelt, without modification, as to principle of action.

2. A return to a system of top-down, and thoroughly defined, as National Banking. The precedents for this shall be taken from the banking-and-credit system established by Alexander Hamilton, as well as Abraham Lincoln's action of creating a national currency ("Greenbacks"), under Presidential authority.

3. The deployment of a new Federal Credit system to generate high-productivity trends in improvements of employment, with the accompanying intention to increase the physical-economic productivity, and the standard of living of the persons and households of the United States. An increase in productive employment, as accomplished under Franklin Roosevelt, must reflect an increase in real productivity, coherent with an increase in energy-flux density in the nation's economic practice.

4. The adoption of a Fusion-Drive Crash Program. Real economics is grounded in the essential distinction of man from all lower forms of life. A Fusion Crash Program, today subsuming a return to Krafft Ehrlicke's vision for the U.S. Space Program, is a commitment to mankind's future.

The standards set forth by Alexander Hamilton in his four reports to Congress were the principles on which our nation was formed. Hamilton described the es-

sential principle of economy as a system of productivity, where the primary measure of value was not based on capital, but the creative powers of mind, which increase the productive powers of labour. Our Nation's Declaration of Independence and Preamble to the Constitution demanded Hamilton's credit system. The idea of the inalienable rights of man is premised on the freedom of human beings to create and discover new principles, which improve mankind's existence in and over the universe. The Pursuit of Happiness is not defined by how much money you possess or that a nation holds in its treasury. It is the ability of each person to contribute to the productivity of the nation and the posterity of that nation. This defines the necessity for credit. Wealth is not created directly by the printing of money. Wealth is measured in the productivity of the economy.

The standards set out by Hamilton in his four reports are universal principles that determine the measures so urgently needed to bring about a new paradigm throughout the planet today. These measures understood and developed uniquely by LaRouche are now being adopted by leading nations throughout the world and must be the standards to which the United States immediately returns.

A nation's commitment to its future, and increasing the scientific and creative output of its society, is a fundamental principle understood by those leaders who have enacted the standard of credit defined by Alexander Hamiltonian. The development of space, and all resources, is a key driver for economic progress throughout the planet. It is not a matter of simply enacting low cost programs placing human lives and the destiny of the nation in the hands of some profiteers. Space exploration is essential for freeing mankind from the confines of one small planet, ending any limitations to mankind's growth and potential. Mankind must be freed from the grips of tyranny, of poverty and of the threat of thermonuclear war, which threatens our very human existence—a result of the failed policies of

speculation and bailouts that has continued to dominate the United States and trans-Atlantic system. We must seek to free our Nation's people from a culture of degeneracy, drug abuse, death and despair—what has been the policy of Presidencies of George W. Bush and especially Barack Obama, and now for nearly two decades. We need a renewed mission to scientific progress in this nation.

As Kennedy and the true visionaries of our space program understood, a national policy for the development of space should be based on the standard of the promotion of a system of national credit, as prescribed by Alexander Hamilton. The space program cannot be seen from the standpoint of a monetary policy, or a public-private partnership for investors to just go and invest in for some short term monetary returns or tax write-off perks; it really has to start from the standpoint of the investigation of the universe and the creative nature of mankind to explore space—this is essential to any economic driver for increasing the productivity of mankind throughout the planet, and throughout the Galaxy. The late great visionary and space pioneer, Krafft Ehrlicke, established this quality of space program based on the increasing need for growth and development of mankind's power over the biosphere and beyond. As he stated:

"Today's mankind can obviously not exist without industrial productivity or without the biosphere; and the activities through technological progress. A mankind, which does not grow in technological skills and the quality of industrial productivity, will become an unbearable burden on the biosphere. Declining or even stagnate technology and industry, are not a viable solution on behalf of mankind or the biosphere."

This is the standard of growth on which nations following the policies of Hamilton and LaRouche are now coming together—part of a commitment for cooperation on economic progress—as expressed by the developments of Russia and China, as with China's offer of a win-win solution for the

benefit of every nation as prescribed in its Belt and Road initiative, which includes the development of space such as the far side of the moon.

The BRICS countries (Brazil, Russia, India, China, South Africa) have continued to defy the intent of an Oligarchy to deny a productive future to the people of this world. In a recent speech to the Valdai International discussion in Sochi, Russia, Russian President Vladimir Putin developed this conception:

"We cannot achieve global stability unless we guarantee global economic progress. It is essential to provide conditions for creative labour and economic growth at a pace that would put an end to the division of the world into permanent winners and permanent losers. The rules of the game should give the developing economies at least a chance to catch up with those we know as developed economies. We should work to level out the pace of economic development, and brace up backward countries and regions so as to make the fruit of economic growth and technological progress accessible to all. Particularly, this would help put an end to poverty, one of the worst contemporary problems."

Later he goes on to say, "An important task of ours is to develop human potential. Only a world with ample opportunities for all, with highly skilled workers, access to knowledge and a great variety of ways to realize their potential can be considered truly free. Only a world where people from different countries do not struggle to survive but lead full lives can be stable."

Continued on page 2

Astronaut Ed White became the first American to walk in space on June 3, 1965.

The measurement of a productive society is not defined by money as such. Money in essence has no intrinsic value. The measurement of wealth in an economy is understood in what LaRouche describes as physical economic terms, i.e. the increase in the productive powers of labour of a society per capita and per square kilometer. This standard, so defined by the United States first treasury secretary Alexander Hamilton, is the founding principle on which Lyndon

The Four New Laws to Save The U.S.A. Now!

NOT AN OPTION: AN IMMEDIATE NECESSITY

BY LYNDON LAROUCHE

The following statement is for immediate action. The priority is assigned to all means and measures of public action, nationally and internationally, without reservation. That priority is existential for the policies of our republic, and for the general information of, and by all relevant circles world-wide, beginning this date of June 8, 2014.

THE FACT OF THE MATTER

The economy of the United States of America, and also that of the trans-Atlantic political-economic regions of the planet, are, now, under the immediate, mortal danger of a general, physical-economic, chain-reaction breakdown-crisis of that region of this planet as a whole. The name for that direct breakdown-crisis throughout those indicated regions of the planet, is the presently ongoing introduction of a general "Bail-in" action under several, or more governments of that region: the effect on those regions, will be comparable to the physical-economic collapse of the post-"World War I" general collapse of the economy of the German Weimar Republic: but, this time, hitting, first, the entirety of the nation-state economies of the trans-Atlantic region, rather than some defeated economies within Europe. A chain-reaction collapse, to this effect, is already accelerating with an effect on the money-systems of the nations of that region. The present acceleration of a "Bail-in" policy throughout the trans-Atlantic region, as underway now, means mass-death suddenly hitting the populations of all nations within that trans-Atlantic region: whether directly, or by "overflow."

The effects of this already prepared action by the monetarist interests of that so-designated region, unless stopped virtually now, will produce, in effect, an accelerating rate of genocide throughout that indicated portion of the planet immediately, but, also, with catastrophic "side effects" of comparable significance in the Eurasian regions.

Treasury Secretary Alexander Hamilton's principle of economics allowed the economic success of the U.S.

The Available Remedies

The only location for the immediately necessary action which could prevent such an immediate genocide throughout the trans-Atlantic sector of the planet, requires the U.S. Government's now immediate decision to **institute four specific, cardinal measures: measures which must be fully consistent with the specific intent of the original U.S. Federal Constitution, as had been specified by U.S. Treasury Secretary Alexander Hamilton while he remained in office:** (1) immediate re-enactment of the Glass-Steagall law instituted by U.S. President Franklin D. Roosevelt, without modification, as to principle of action. (2) A return

to a system of top-down, thoroughly defined National Banking.

The actually tested, successful model to be authorized is that which had been instituted, under the direction of the policies of national banking which had been actually, successfully installed under President Abraham Lincoln's superseding authority of a currency created by the Presidency of the United States (e.g. "Greenbacks"), as conducted as a national banking-and-credit-system placed under the supervision of the Office of the Treasury Secretary of the United States.

For the present circumstances, all other banking and currency policies, are to be superseded, or, simply, discontinued, as follows: Banks qualifying for operations under this provision, shall be assessed for their proven competence to operate as under the national authority for creating and composing the elements of this essential practice, which had been assigned, as by tradition, to the original office of Secretary of the U.S. Treasury under Alexander Hamilton. This means that the individual states of the United States are under national standards of practice, and, not any among the separate states of our nation.

(3) *The purpose of the use of a Federal Credit-system, is to generate high-productivity trends in improvements of employment, with the accompanying intention, to increase the physical-economic productivity, and the standard of living of the persons and households of the United States.* The creation of credit for the now urgently needed increase of the relative quality and quantity of productive employment, must be assured, this time, once more, as was done successfully under President Franklin D. Roosevelt, or by like standards of Federal practice used to create a general economic recovery of the nation, per capita, and for rate of net effects in productivity, and by reliance on the essential human principle, which distinguishes the human personality from the systemic characteristics of the lower forms of life: the net rate of increase of the energy-flux density of effective practice. This means intrinsically, a thoroughly scientific, rather than a merely mathematical one, and by the related increase of the effective energy-flux density per capita, and for the human population when considered as each and all as a whole. The ceaseless increase of the physical-productivity of employment, accompanied by its benefits for the general welfare, are a principle of Federal law which must be a paramount standard of achievement of the nation and the individual.¹

(4) *"Adopt a Fusion-Driver 'Crash Program.'" The essential distinction of man from all lower forms of life, hence, in practice, is that it presents the means for the perfection of the specifically affirmative aims and needs of human individual and social life.* Therefore: the subject of man in the process of creation, as an affirmative identification of an affirmative statement of an absolute state of nature, is a permitted form of expression. Principles of nature are either only affirmation, or they could not be affirmatively stated among civilized human minds.

Given the circumstances of the United States, in particular, since the assassinations of President John F. Kennedy, and

1. The substitution of "3. Cancel Green Policies..." for the correct, "A Federal Credit-System," is a travesty against the principles of any actually scientific principle. Only affirmative identifications of "Science," could ever be allowed. Only the previous title: "The Use of a Federal Credit System" is permitted. Eliminate all use of "reference to 'Green Policies'": the very use of that latter reference, is a fraudulent representation.

man on practically all fronts of his physical and spiritual existence. The idea of travelling to other celestial bodies reflects to the highest degree the independence and agility of the human mind. It lends ultimate dignity to man's technical and scientific endeavours. Above all it touches on the philosophy of his very existence. As a result the concept of space travel disregards national borders, refuses to recognize differences of historical and ethnological origin, and penetrates the fiber of one's sociological and political creed as fast as that of the next.²

We must restore our commitment once again to a national mission and a true science driver program, just and LaRouche has prescribed in his four laws. The United States must take up the offer of international cooperation. We must define a new standard of credit for development throughout the planet, just as Hamilton established, which supersedes mere monetary value and establishes a system that truly invests in the future of its people and the future of its nation.

his brother, Robert, the rapid increase required for even any recovery of the U.S. economy, since that time, requires nothing less than measures taken and executed by President Franklin D. Roosevelt during his actual term in office. The victims of the evil brought upon the United States and its population since the strange death of President Harding, under Presidents Calvin Coolidge and Herbert Hoover (like the terrible effects of the Bush-Cheney and Barack Obama administrations, presently) require remedies comparable to those of President Franklin Roosevelt while he were in office.

This means emergency relief measures, including sensible temporary recovery measures, required to stem the tide of death left by the Coolidge-Hoover regimes: measures required to preserve the dignity of what were otherwise the unemployed, while building up the most powerful economic and warfare capabilities assembled under the President Franklin Roosevelt Presidency for as long as he remained alive in office. This meant the mustering of the power of nuclear power, then, and means thermonuclear fusion now. Without that intent and its accomplishment, the population of the United States in particular, faces, now, immediately, the most monstrous disaster in its history to date. In principle, without a Presidency suited to remove and dump the worst effects felt presently, those created presently by the Bush-Cheney and Obama Presidencies, the United States were soon finished, beginning with the mass-death of the U.S. population under the Obama Administration's recent and now accelerated policies of practice.

There are certain policies which are most notably required, on that account, now, as follows:

Vernadsky on Man & Creation

V.I. Vernadsky's systemic principle of human nature, is a universal principle, which is uniquely specific to the crucial factor of the existence of the human species. For example: "time" and "space" do not actually exist as a set of metrical principles of the Solar system; their only admissible employment is for purposes of communication is an essentially nominal presumption. Since competent science for today can be expressed only in terms of the unique characteristic of the human species' role within the known aspects of the universe, the human principle is the only true principle known to us for practice: the notions of space and time are merely useful imageries:

Rather:

The essential characteristic of the human species, is its distinction from all other species of living processes: that, as a matter of principle, which is rooted scientifically, for all competent modern science, on the foundations of the principles set forth by Filippo Brunelleschi (the discoverer of the ontological minimum), Nicholas of Cusa (the discovery of the ontological maximum), and the positive discovery by mankind, by Johannes Kepler, of a principle coincident with the perfected Classical human singing scale adopted by Kepler, and the elementary measure of the Solar System within the still larger universe of the Galaxy, and higher orders in the universe.

Or, similarly, later, the modern physical-scientific standard implicit in the argu-

ment of Bernhard Riemann, the actual minimum (echoing the principle of Brunelleschi), of Max Planck, the actual maximum of the present maximum, that of Albert Einstein; and, the relatively latest, consequent implications of the definition of human life by Vladimir Ivanovich Vernadsky. These values are, each relative absolute of measurement of man's role within the knowledge of the universe.

This set of facts pertains to the inherent fraud of the merely mathematicians and the modernist "musical performers" since the standard of the relevant paragon for music, Johannes Brahms (prior to the degenerates, such as the merely mathematicians, such as David Hilbert and the true model for every modern Satan, such as Bertrand Russell, or Tony Blair).

The knowable measure, in principle, of the difference between man and all among the lower forms of life, is found in what has been usefully regarded as the naturally upward evolution of the human species, in contrast to all other known categories of living species. The standard of measurement of these compared relationships, is that mankind is enabled to evolve upward, and that categorically, by those voluntarily noëtic powers of the human individual will.

Except when mankind appears in a morally and physically degenerate state of behavior, such as within the cultures of the tyrants Zeus, the Roman Empire, and the British empire, presently: all actually sane cultures of mankind, have appeared, this far, in a certain fact of evolutionary progress from the quality of an inferior, to a superior species. This, when considered in terms of efficient effects, corresponds, within the domain of a living human practice of chemistry, to a form of systemic advances, even now leaps, in the chemical energy-flux density of society's increase of the effective energy-flux-density of scientific and comparable expressions of leaps in progress of the species itself: in short, a universal physical principle of human progress.

The healthy human culture, such as that of Christianity, if they warrant this affirmation of such a devotion, for example, represents a society which is increasing the powers of its productive abilities for progress, to an ever higher level of per-capita existence. The contrary cases, "the so-called zero-growth" scourges, such as the current British empire are, systemically, a true model consistent with the tyrannies of a Zeus, or, a Roman Empire, or a British (better said) "brutish" empire, such as the types, for us in the United States, of the Bush-Cheney and Obama administrations, whose characteristic has been, concordant with that of such frankly Satanic models as that of Rome and the British empire presently, a shrinking human population of the plan-

Physical economist and statesman Lyndon H. LaRouche, Jr.

et, a population being degraded presently in respect to its intellectual and physical productivity, as under those U.S. Presidencies, most recently.

Chemistry: The Yardstick of History

We call it "chemistry." Mankind's progress, as measured rather simply as a species, is expressed typically in the rising power of the principle of human life, over the abilities of animal life generally, and relatively absolute superiority over the powers of non-living processes to achieve within mankind's willful intervention to that intended effect. Progress exists so only under a continuing, progressive increase of the productive and related powers of the human species. That progress defines the absolute distinction of the human species from all others presently known to us. A government of people based on a policy of "zero-population growth and per capita standard of human life" is a moral, and practical abomination.

Man is mankind's only true measure of the history of our Solar system, and what reposes within it. That is the same thing, as the most honored meaning and endless achievement of the human species, now within nearby Solar space, heading upward to mastery over the Sun and its Solar system, the one discovered (uniquely, as a matter of fact), by Johannes Kepler.

A Fusion economy, is the presently urgent next step, and standard, for man's gains of power within the Solar system, and, later, beyond.

Launch of one of China's enormously successful Long March Rockets.

Create a Classical Renaissance with the Schiller Institute NYC Community Chorus

The Schiller Institute Chorus is committed to creating a renaissance in the United States based on principles of Classical Composition. In music this means Italian "bel canto" placement of the voice at the proper scientific tuning, as advocated by Giuseppe Verdi of Middle C = 256 Hz. (A no higher than 432 Hz).

In September 2016, the Schiller Institute NYC Chorus, joined by friends from NJ, Boston, and Virginia, was able to perform the entire Mozart Requiem with a chorus of over 80 members, and a professional orchestra and soloists, in living memorial for those lost on 9/11/2001.

The chorus has now expanded to Queens and Brooklyn over the past year, and has become a crucial part of Lyndon LaRouche's "Manhattan Project," to restore Manhattan as the intellectual and cultural capital of the United States, as it was during the time of Alexander Hamilton.

Enact Four Laws Now!

Continued from page 1

Shortly following this address member states of the BRICS nations agreed to set up joint systems of space satellites for earth remote sensing, as reported by the head of the Russian space corporation Roscosmos. This is a decisive move toward cooperation in space, and which leaves the U.S. isolated and mundane.

The commitment to cooperation in the development of space by those nations joining with Russia and China today fall directly inline with the vision set forth by Krafft Ehicke as he describes the concept of space travel,

"The concept of space travel carries with enormous impact, because it challenges
